

4D Gel Nail Form Instructions

Step One: Prep the nail by doing a dry manicure. Push back the cuticle and do a light buffing on the natural nail bed. Wipe away all dust.

Step Two: Apply 4D Nail Keratin Bond on the natural nail only and allow to air dry.

Step Three: Apply 4D Nail Base Coat to the nail and/or tip and cure for 50 seconds.

Step Four: Put on special clear 4D Gel nail form.

Step Five: Squeeze a dollop of gel to the top of the tube. Swipe the dollop with the knife tool and place it on the nail.

Have the Sculpting Solution ready to use when forming the gel drop on the nail. Dip a small flat brush sparingly into the Sculpting Solution and use it to shape 4D Gel. The Sculpting Solution is to ease the movement of the 4D Gel and keep the gel from sticking to the brush.

The gel will not harden until cured. This allows you limitless time to shape the gel, using the Sculpting Solution as long as you need to get a perfect nail.

Step Six: Once you reach the desired form, cure for 50 seconds under lamp.

Step Seven: File with 180 grit file to shape and buff gel surface. Wipe away all dust.

Step Seven: Apply 4D No Cleanse Top Coat and Cure.

Step Eight: Finish with cuticle oil around the nail.

4D Gel Pink and White Reverse French Nails

Use 4D Nail Forms or glued tips to create nail extensions with 4D Gel.

Step One: Prep the nail by doing a dry manicure. Push back the cuticle and do a light buffing on the natural nail bed. Wipe away all dust.

Step Two: Apply 4D Nail Keratin Bond on the natural nail only and allow to air dry.

Step Three: Apply 4D Nail Base Coat to the nail and/or tip and cure for 50 seconds.

Step Four: Squeeze a dollop of one of the Pink 4D Gels to the top of the tube. Swipe the dollop with the knife tool and place it on top the natural nail to create the pink nail bed.

Have the Sculpting Solution ready to use when forming the gel drop on the nail. Dip a small flat brush sparingly into the Sculpting Solution and use it to shape 4D Gel. The Sculpting Solution is to ease the movement of the 4D Gel and keep the gel from sticking to the brush. Shape the 4D Gel from the cuticle to 3/4th down the nail and leave space for the white smile line.

The gel will not harden until cured. This allows you limitless time to shape the gel, using the Sculpting Solution as long as you need to get a perfect nail.

Step Five: Once you reach the desired form, cure for 50 seconds under lamp.

Step Six: Squeeze a dollop of Opaque White 4D Gel to the top of the tube. Swipe the dollop with the knife tool and place it on the tip of the nail.

Use Sculpting Solution and use it to shape white gel to the edge of the nail and form the tip. Continue to smooth over gel to create the perfect french look.

Step Six: Once you reach the desired form, cure for 50 seconds under lamp. The white 4D Gel may need two curing cycles because of the high pigmentation of the 4D Gel.

Step Seven: File with 180 grit file to shape and buff gel surface. Wipe away all dust.

Step Eight: Apply 4D No Cleanse Top Coat and Cure.

Step Nine: Finish with cuticle oil around the nail.

4D Gel Removal

Remove bulk of 4D Gel to about Gel polish thickness.

Steam Off Method

- Use the Gel II Professional Steam Removal System.
- Add Gentle Soak Gel Polish Remover into the cups.
- Allow nails to steam for 10 minutes.
- Use a Bamboo Stick to gently help remove 4D Gel.
- Finish with Cuticle Oil around the nail.

Foil Wrap Method

- Use the Gel II Remover Foil Wraps.
- Sprinkle with Gentle Soak Gel Polish Remover on the pad. Making sure to place the soaked pad over the nail, wrap the foil around the top of the finger to hold in place.
- Leave foil tips on for 10 minutes.
- If low heat from a warm towel is placed over the hands, this will help the removal process.
- Use a Bamboo Stick to gently help remove 4D Gel.
- Finish with Cuticle Oil around the nail.
